PROFESSIONAL SUMMARY

Second-year Computer Science student at VIT Chennai who builds working, end-to-end projects rather than just following tutorials — from a sensor-based rainfall prediction model to a self-trained fact-checking browser extension. Comfortable across Python, Java, and C/C++, with growing hands-on experience in web development (HTML/CSS/JavaScript, React, Node.js) and applied machine learning (scikit-learn, pandas). Has collaborated on a team project integrating a third-party AI API into a developer tool, and enjoys learning by building.

TECHNICAL SKILLS

Languages: Python, Java, C, C++, JavaScript
Web Development: HTML, CSS, JavaScript, React, Node.js
Machine Learning: scikit-learn, pandas, NumPy — applied/coursework-level
Databases & Tools: MySQL, Git, GitHub, VS Code

EDUCATION

B.Tech, Computer Science and Engineering — VIT Chennai Expected Graduation: 2029
CGPA: 7.43 / 10.0
Relevant Coursework: Data Structures & Algorithms, Object-Oriented Programming, Database Management Systems, Operating Systems, Computer Networks, Computation Structures

PROJECTS

PrecipyTech — Sensor-Based Rainfall Prediction System | *Python, scikit-learn, pandas, NumPy*
- Built a machine learning system that predicts rainfall for an area using readings collected from multiple physical sensors.
- Collected and preprocessed sensor data and trained a scikit-learn model to generate predictions from it.
- Independent first-year project undertaken to apply classroom ML concepts to a real, physical data source.

Fact-Checker — Chrome Extension | *Python, JavaScript, Custom-Trained Model*
- Built a browser extension that evaluates whether a selected sentence is likely true or false.
- Trained a custom classification model on a labeled dataset and connected it to the extension through a Python backend.
- Structured the project as a separate backend and extension, making the detection logic easier to update independently of the UI.

DevPilot — AI-Assisted Coding Tool (Team Project) | *JavaScript, NVIDIA AI API*
- Collaborated with a teammate to build an in-IDE assistant, conceptually similar to GitHub Copilot, that automatically detects and fixes code issues as the developer types.
- Integrated the NVIDIA AI API to power real-time code analysis and auto-fix suggestions.
- Contributed to the design and implementation of the automatic code-correction workflow as part of a two-person team.

Real-Time Hand Gesture Recognition | *Python, MediaPipe, scikit-learn*
- Built a computer vision system that recognizes hand gestures live from a webcam feed using hand-landmark tracking.
- Collected gesture training data and trained a classification model used for real-time predictions.

Additional Projects: Gym Management Website (HTML, CSS, JavaScript, MySQL) — website to store and manage gym membership data. Backend REST API (Node.js, Express) — REST API built to serve a web application.

CERTIFICATIONS

- Machine Learning — Kaggle
- Python — Kaggle
- C Programming — Simplilearn

LEADERSHIP & ACTIVITIES

Rajasthan Club, VIT Chennai — Event Organizer
- Served on the management committee for Mela, a college cultural event.
- Hosted and ran a PC gaming stall for students at Kesariya, another college cultural event.

House In-Charge, School
- Led house-level coordination and student participation across inter-house events and competitions; house won the House Cup during this tenure.
